

"Method and device for processing a document available in the form of a set of digital data"

ABSTRACT

Processing of digital data representing a document in order to represent parts of this document according to one or other of two possible resolutions.

From a set of digital data, a first series of data (8, 9) is produced in which digital data in one category are masked and a second series of data (8', 9') in which digital data in another category are masked, and these two series, corresponding notably to different resolutions, are used.
